Aim:

Write a program to find the sum of n elements by allocating memory by using calloc() function.

At the time of execution, the program should print the message on the console as:

```
Enter n value :
```

For example, if the user gives the input as:

using calloc() function

```
Enter n value : 4
```

Next, the program should print the message on the console as:

```
Enter 4 values :
```

For example, if the user gives the input as:

```
Enter 4 values : 3 5 4 7
```

then the program should print the result as:

```
The sum of given array elements : 19
```

Note: Write the functions allocateMemory(), read() and sum() in [UsingCalloc.c].

Source Code:

```
SumOfArray2.c
```

```
#include <stdio.h>
#include <stdlib.h>
#include "UsingCalloc.c"
void main() {
   int *p, n, i;
   printf("Enter n value : ");
   scanf("%d", &n);
   p = allocateMemory(n);
   printf("Enter %d values : ", n);
   read(p, n);
   printf("The sum of given array elements : %d\n", sum(p, n));
}
```

UsingCalloc.c

```
int*allocateMemory(int n);
void read(int*,int);
int sum(int*,int);
int*allocateMemory(int n)
{
   int*p;
   p=(int*)calloc(n, sizeof(int));
   return p;
```

```
void read(int*p,int n)
   int i;
   for (i=0;i<n;i++)
      scanf("%d" ,p);
      p++;
}
}
int sum(int*p,int n)
   int i,sum=0;
   for(i=0;i<n;i++)
   sum=sum+p[i];
   return sum;
}
```

Execution Results - All test cases have succeeded!

Test Case - 1	
User Output	
Enter n value : 5	
Enter 5 values : 2 5 33 11 26	
The sum of given array elements : 77
